Section 1 : Coding

1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

10 20 30 40 50

Output: 10 20 30 40 50

Answer

```
#include <stdio.h>
#include <stdlib.h>
```

```
struct Node {
    int studentID;
    struct Node* next;
    struct Node* prev;
};
```

```
struct Node* createNode(int studentID) {
    struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
    if (newNode == NULL) {
        printf("Memory allocation failed\n");
        exit(1);
    }
    newNode->studentID = studentID;
    newNode->next = NULL;
    newNode->prev = NULL;
    return newNode;
}
```

```
void insertAtEnd(struct Node** head, struct Node** tail, int studentID) {  
    struct Node* newNode = createNode(studentID);
```

```
    if (*head == NULL) {
```

```
        *head = newNode;
```

```
        *tail = newNode;
```

```
    } else {
```

```
        (*tail)->next = newNode;
```

```
        newNode->prev = *tail;
```

```
        *tail = newNode;
```

```
    }
```

```
}
```

```
void displayList(struct Node* head) {  
    struct Node* current = head;
```

```
    while (current != NULL) {
```

```
        printf("%d ", current->studentID);
```

```
        current = current->next;
```

```
    }
```

```
    printf("\n");
```

```
}
```

```
void freeList(struct Node* head) {  
    struct Node* current = head;  
    struct Node* next;
```

```
    while (current != NULL) {
```

```
        next = current->next;
```

```
        free(current);
```

```
        current = next;
```

```
    }
```

```
}
```

```
int main() {
```

```
    struct Node* head = NULL;
```

```
    struct Node* tail = NULL;
```

```
int n, studentID;
```

```
scanf("%d", &n);
```

```
for (int i = 0; i < n; i++) {  
    scanf("%d", &studentID);  
    insertAtEnd(&head, &tail, studentID);  
}
```

```
displayList(head);
```

```
freeList(head);
```

```
return 0;
```

```
}
```
